# CHEAT HERO

# Economic Indicators Cheat Sheet

U A quick reference guide to key economic indicators used to assess the health and performance of an economy.

# Gross Domestic Product (GDP)

**Definition:** The total value of goods and services produced within a country's borders during a specific time period (usually a quarter or a year).

**Importance:** Primary indicator of economic size and growth. Used to compare the performance of different economies.

#### Types:

- Nominal GDP: GDP measured at current prices.
- Real GDP: GDP adjusted for inflation. Provides a more accurate measure of economic growth.
- GDP per capita: GDP divided by the population. Indicates the average standard of living.

#### Calculation Methods:

- Expenditure Approach: GDP = Consumption
  + Investment + Government Spending + (Exports - Imports)
- Income Approach: GDP = Sum of all income earned within the country (wages, rent, profit, etc.)

**Limitations:** Does not account for non-market activities (e.g., household work), environmental degradation, or income inequality.

# **Fiscal and Monetary Indicators**

# Government Debt

**Definition:** The total amount of money owed by a government to its creditors.

**Measurement:** Usually expressed as a percentage of GDP. Provides an indication of a country's ability to repay its debt.

**Impact:** High levels of government debt can lead to higher interest rates, reduced government spending on essential services, and potential economic instability.

# Inflation Rate

**Definition:** The rate at which the general level of prices for goods and services is rising, and subsequently, purchasing power is falling.

**Measurement:** Typically measured using the Consumer Price Index (CPI) or the Producer Price Index (PPI).

**Consumer Price Index (CPI):** Measures the average change over time in the prices paid by urban consumers for a basket of consumer goods and services.

**Producer Price Index (PPI):** Measures the average change over time in the selling prices received by domestic producers for their output.

#### Types:

- Demand-Pull Inflation: Occurs when there is too much money chasing too few goods.
- Cost-Push Inflation: Occurs when the cost of production increases (e.g., rising wages or raw material costs).

### Unemployment Rate

**Definition:** The percentage of the labor force that is unemployed but actively seeking employment.

**Calculation:** (Number of Unemployed / Labor Force) \* 100

• Labor Force: Sum of employed and unemployed individuals.

#### Types:

- Frictional Unemployment: Temporary unemployment due to job transitions.
- Structural Unemployment: Unemployment due to a mismatch between the skills of workers and the requirements of available jobs.
- Cyclical Unemployment: Unemployment due to fluctuations in the business cycle.

Limitations: Doesn't include discouraged workers (those who have stopped looking for work) or underemployed workers (those working part-time but wanting full-time employment).

# Budget Deficit/Surplus

### Definition:

- Budget Deficit: Occurs when government spending exceeds government revenue.
- Budget Surplus: Occurs when government revenue exceeds government spending.

**Impact:** Budget deficits can lead to increased government debt, while budget surpluses can be used to reduce debt or fund public programs.

# Interest Rates

**Definition:** The cost of borrowing money, usually expressed as an annual percentage rate.

**Central Bank Influence:** Central banks (e.g., the Federal Reserve in the US) use interest rates as a tool to control inflation and stimulate economic growth.

#### Impact:

- Lower interest rates encourage borrowing and investment, stimulating economic growth.
- Higher interest rates discourage borrowing and investment, helping to control inflation.

#### Types

- Federal Funds Rate
- Discount Rate
- Prime Rate

# **External Sector Indicators**

# Balance of Trade

**Definition:** The difference between a country's exports and imports of goods and services.

Trade Surplus: Exports exceed imports. Trade Deficit: Imports exceed exports.

**Impact:** Trade surpluses can boost economic growth, while trade deficits can reduce it.

# **Other Important Indicators**

Consumer Confidence Index (CCI)

**Definition:** A measure of consumers' optimism or pessimism regarding the state of the economy and their personal financial situations.

**Impact:** High consumer confidence tends to lead to increased spending, while low consumer confidence tends to lead to decreased spending.

#### **Exchange** Rates

**Definition:** The value of one currency in terms of another.

**Appreciation:** A currency becomes more valuable relative to another currency.

**Depreciation:** A currency becomes less valuable relative to another currency.

**Impact:** Exchange rates affect the price of exports and imports, influencing a country's trade balance.

#### Purchasing Managers' Index (PMI)

**Definition:** A measure of the prevailing direction of economic trends in the manufacturing and service sectors.

**Interpretation:** A PMI above 50 indicates an expansion of the sector, while a PMI below 50 indicates a contraction.

#### Foreign Direct Investment (FDI)

**Definition:** Investments made by a company or individual in one country into business interests located in another country.

**Impact:** FDI can bring new technology, jobs, and capital into a country, boosting economic growth.

#### Housing Market Indicators

**Examples:** New home sales, existing home sales, housing prices, and mortgage rates.

**Impact:** The housing market is a leading indicator of economic activity. A strong housing market tends to indicate a healthy economy, while a weak housing market tends to indicate a struggling economy.
